- Understory layer
- ~~Understory layer~~
- jaguars

- howler monkey

Forest floor

- tigers
- cheetah
- ~~• howler~~
- ~~• jaguars~~
- ~~• monkey~~

The emergent layer is the top with the tallest trees.

Canopy layer is the 'roof' where most plant life is found.

The understory layer is filled with shrubs, young trees, and plants with large leaves.

The forest floor is the darkest layer, receiving only about 2% sunlight, which limits plant growth.
